$$T = \int_{-\infty}^{\infty} \frac{\sin(x)}{x} dx = \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx$$

$$\int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx = \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx = \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx$$

$$\Rightarrow \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx = \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx = \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx$$

$$\Rightarrow \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx = \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx = \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx$$

$$\Rightarrow \int_{-\infty}^{\infty} \frac{e^{ix}}{x} dx = \int_{-\infty}$$
